

# COMPANY PROFILE

## FACET ENGINEERING

LEADERS IN CONVEYOR SYSTEMS &  
PROCESS ENGINEERING SOLUTIONS

Facet Engineering is a pioneering company, striving for the pursuit of excellence in the supply of conveying and process engineering systems. Since the company's inception in 1989, we have developed an extensive range of equipment, have built up a wealth of knowledge and expertise and offer our clients excellent value for money and customer service.

We offer machinery and turnkey solutions for moving raw materials to transform them into value-added product. Having been in the industry for more than 30 years, our experience in these areas is unsurpassed, making us leaders in the field.

We understand the synergy between conveyor systems and process engineering; knowing that the majority of conveyors are found within a process plant. To this end, we have diverted all our energy in the following areas:

- Developing an extensive range of conveyor systems
- Developing our knowledge and expertise in the Agri-food processing sector
- Setting up a state-of-the-art design and manufacturing facility to deliver quality products
- Developing a range of process and blending machinery
- Providing the best and most valuable customer service

Facet Engineering was established in 1989, by present CEO, Colin Fairweather, originally as an engineering and design office, providing design, draughting and project management services to the conveying and agri-food processing industries.

We then set up our own manufacturing facility, enabling us to independently produce our range of equipment. Over the years, as we grew, so did our manufacturing capacity. We now have a fully-equipped 2000m<sup>2</sup> facility, with CNC plasma cutting equipment and a state-of-the-art machine shop.

We utilise the latest computer-aided drafting systems and software, allowing us to produce highly detailed designs, to the exact specifications of the client. All manufacturing follows strict quality control procedures, and we pride ourselves in producing systems and equipment of the highest industry standard.

As a multi-faceted organisation, Facet Engineering offers two areas of specialisation; namely conveyor systems and process engineering machinery. We offer one of the largest ranges of conveyors available in Southern Africa, catering for the needs of most sectors of the market. Our range of process engineering equipment is highly specialised, predominantly supplying the agri-food and chemical processing sector. The two divisions work synergistically, as almost every processing plant will have the need for conveyors.

What sets us apart, along with our our passion for design, high quality manufacture and client service, is our capability to expertly provide innovative, bespoke solutions to our clients, ensuring that we always meet the exact needs of our customers and exceed their expectations.
